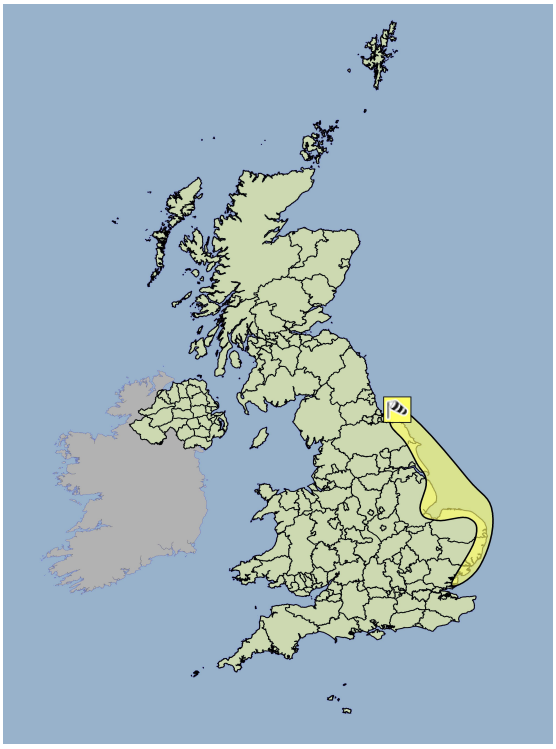
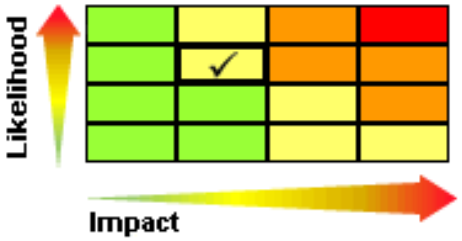
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure will pass close to northern Scotland today, moving southeast into the North Sea on Thursday. This will cause gale force winds to spread along eastern coasts, along with some large waves and surge. Whilst gusts of 50 to 60 mph are unlikely to cause disruption due to wind damage, the associated large waves and surge may well cause some minor flooding impacts in parts of coastal Eastern England. Winds will begin to ease from the north of this warning area later tomorrow.
This warning has been CORRECTED to remove Cambridgeshire and include Essex.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **00:05 on Thu, 10th Oct 2013** until **23:59 on Thu, 10th Oct 2013**

Gale force northerly winds will develop in coastal areas of Eastern England overnight, with the likelihood of 50 to 60 mph gusts in places during Thursday.

The public should be aware of the potential for minor coastal disruption, primarily due to large waves, such as overtopping of sea walls, and perhaps some flooding of coastal roads.
